//Cloue lib="Soares NFL State 1: Not I; Site 2: Eco RI;
Equal amounts of plasmid DNA from three normalized
libraries (fetal lung NbHL19W, testis NHT, and B-cell
NCI CGAP GCB1) were mixed, and ss circles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hybridization reaction. The driver
was PCR-amplified cDNAs from pools of 5,000 clones made
from the same 3 libraries. The pools consisted of
I.M.A.G.B. clones 297480-302087, 682632-687239,
726408-728711, and 729096-731399. Subtraction by Bento
Soares and M. Fatima Bonaldo. "

Sequence 1, Application US/09802117

Patent No. 6444456

GENERAL INFORMATION:

APPLICANT: Wilganowski, Nathaniel L.

APPLICANT: Wilganowski, Nathaniel L.

APPLICANT: Turner, C. Alexander Jr.

TITLE OF INVENTION: Encoding the Same

TITLE OF INVENTION: Encoding the Same

FILE REFERENCE: LEX-0147-USA

CURRENT APPLICATION NUMBER: US/09/802,117

CURRENT APPLICATION NUMBER: US/09/802,117

CURRENT FILING DATE: 2001-03-08

PRIOR APPLICATION NUMBER: US 60/188,449

PRIOR APPLICATION OUNDER: US 60/188,449

PRIOR APPLICATION DATE: 2000-03-10

NUMBER OF ESC ID NOS: 5

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1

P-PSDB;

Novel isolated G protein coupled receptor kinase, 69087, nuclear signaling protein, 15821 or mitogen activated protein kinase phosphatase, 15418, useful for treating cellular proliferative or differentiative

Claim 1; Fig 1; 98pp; English

The present invention relates to the isolation of a novel human G protein coupled receptor (GPCR) kinase (GPCRK) designated 69087), a novel human runclear signalling protein designated 1521, and a novel human runclear signalling protein designated 1521, and a novel human mitogenactivated protein kinase (MAPK) phosphatase MAPKP designated 15418, and the polynucleotide sequences encoding them. The sequences such as convention are useful for treating and disgnosing disorders such as collular proliferative and differentiative disorders (e.g. haematopoietic cellular proliferative and differentiative disorders (e.g. haematopoietic cephilatic disorders, leukaemia, carcinoma, sarcoma or metastatic disorders). They are also useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, forensic biology), predictive cepticals and pharmacogenomics), and in methods of treatment (e.g. trials and prophylactic). The sequences may also be used to screen public databases to identify other family members or related sequences. that bind the polypeptides. The polynucleotide sequences are useful for mapping their respective genes on a chromosome, identifying gene regions associated with cellular proliferative or differentiative disorders, and The polypeptide sequences are useful as immunogens to generate antibodies gene therapy. The present sequence encodes human GPCRK 69087

The present cDNA sequence encodes a human G-protein coupled receptor kinase (GRK), also designated NHP (novel human protein) in the specification, which is shown in the sequence listing. The invention comprises novel human nucleotide and protein sequences which have similarity to G-protein coupled receptor kinases. Oligonucleotides
                                                                                                                                                                                                                                                                                             New polynucleotides encoding human proteins that share sequence similarity with animal kinases e.g. G-protein coupled receptor kinases, useful for drug screening, diagnosis and in gene therapy of biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAH78799 standard; cDNA; 2249 BP.

888888888888888**%**& invention can be used to genetically engineer host cells to express GRK products in vivo. The nucleotide sequences of the invention are also useful in addressable arrays for identifying and characterising the temporal and tissue specific expression of a gene and in microarrays to screen collections of genetic material from patients who have a particular medical condition. The proteins of the invention are useful for generating antibodies, as reagents in diagnostic assays, for derived from the nucleotides of the invention are useful as hybridisation probes for screening libraries and assessing gene expression patterns. The nucleotides of the invention are also useful in drug screening and gene therapy for the modulation of GRK expression. The nucleotides of the identifying other cellular gene products related to GRK, and as reagents in assays for screening for compounds that are useful in the treatment of biological or medical disorders/diseases

New G-protein coupled receptor kinase polypeptides and polynucleotides, useful in identifying modulators of the enzyme for treating cancer, diabetes, a central nervous system disorder, a cardiovascular disorder or

Claim 1; Fig 11; 129pp; English.

The present sequence encodes a human G protein-coupled receptor kinase (GRK) protein (I). (I) has cytostatic, antidiabetic, neuroprotective, nootropic, cardiovascular, anti-Parkinsonian, cardiant, vasotropic and antiasthmatic activities, and can be used in gene therapy. (I) can be regulated to treat cancer, diabetes, a central nervous system (CNS) disorder (e.g. anxiety or mood disorders, Alzheimer's disease and Parkinson's disease), cardiovascular disorders (e.g. congestive heart failure, mycoardial infarction, ischaemic diseases of the heart or hypertensive vascular disease), asthma and chronic obstructive pulmonary disorder (COPD). GRK molecules are useful in screening for agents that regulate or decease the activity of a GRK. GRK sequences may also be used for detecting diseases and abnormalities or susceptibility to diseases and abnormalities related to the presence of mutations in the nucleic

New NOVX polypeptides and polynucleotides, useful in gene therapy, particularly for treating or preventing a syndrome associated with human disease e.g. diabetes, obesity, cancer, Alzheimer's disease,

The invention relates to new isolated NOVX polypeptides, the genes considered them or sequences having at least 95% identity to the amino acid cor nucleotide sequences. The NOVX polypeptide is useful as a therapeutic, particularly in the manufacture of a medicament for treating a syndrome associated with a human disease, which includes a pathology associated with NOVX polypeptide is particularly useful for treating, preventing or alleviating pathology associated with NOVX corrections or alleviating pathology associated with NOVX corrections, preventing e.g. corrections, descriptions, a nonexia, wasting of preventing e.g. corrections, dyslipidemias, anorexia, wasting disorders, Alzheimer's disease, parkinson's disorder, cachexia, cardiomyopathy, AIDS, asthma, Crohn's corrections is disorder, cachexia, cardiomyopathy, AIDS, asthma, Crohn's corrections is useful in gene therapy for treating the above conditions. These are also useful in gene therapy for treating the above conditions. These are also useful in developing powerful assay system for functional analysis of various human disorders, as well as in diagnostic applications. This sequence represents one of the NOVX genes of the
